Executive Summary

This report presents a business intelligence analysis of wine trade operations. Based on five key visualizations developed in Power BI, this report identifies strategic opportunities and risks across four dimensions: sourcing geography, customer geography, product quality, and customer concentration. Total net revenue for the period amounted to € 8,834,440.23. The following sections provide data driven recommendations to support management in further business development.

Area	Key Finding	Priority
Country of Origin	US dominates with 47% of revenue – high dependency risk	**High**
Austrian States	N generates 26% of revenue; V only 4% – geographic gap	**High**
Wine Quality	Revenue peaks at scores 90-92 – mid-premium sweet spot	**Medium**
Top Customers	Top 5 customers drive significant revenue – concentration risk	**High**
Top Wineries	Errazuriz leads but gap to #2 is large – supplier dependency	**Medium**

1. Revenue & Contribution Margin by Country of Origin

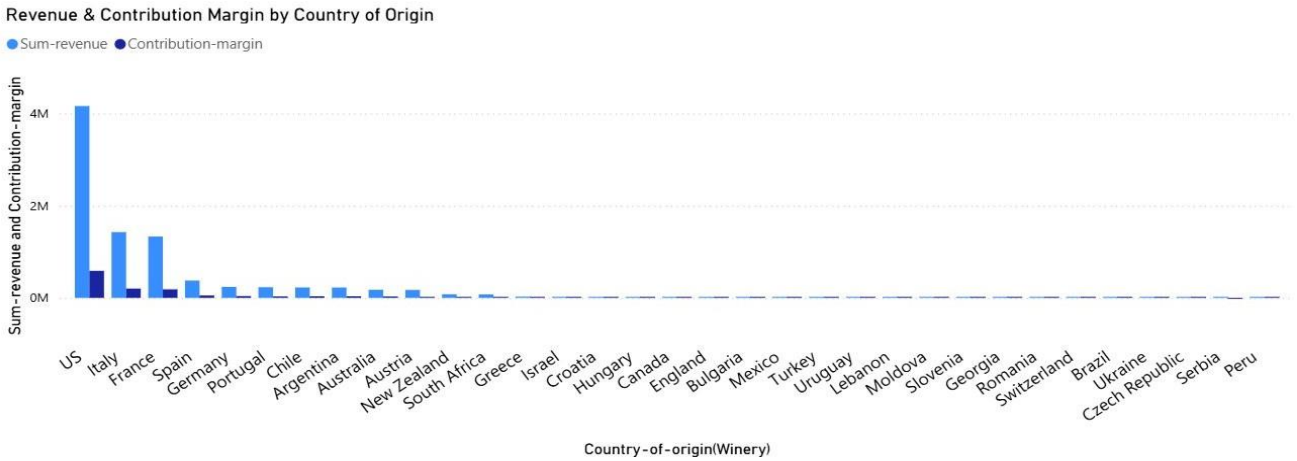

Figure 1: Revenue and Contribution Margin by Country of Origin

Finding

The United States is by far the dominant country of origin, generating approximately € 4.16 million in net revenue, representing 47% of total revenue. Italy and France follow at €1.43M and €1.33M respectively. All remaining 30 countries account for less than €2M. Notably, the contribution margin bars for most countries appear very small relative to revenue, suggesting thin margins across most origins.

Recommendations

1. Reduce dependency on US wines by actively developing supplier relationships in Italy and France, which already show strong revenue potential and could offset risk if US supply chains are disrupted.

2. Conduct a detailed margin analysis per country. Countries with high revenue, but low contribution margin should be reviewed for pricing adjustments or supplier renegotiations.

3. Explore emerging wine regions (Austria, Argentina, Spain) which show growth potential and could diversify the product portfolio.

2. Revenue by Austrian State

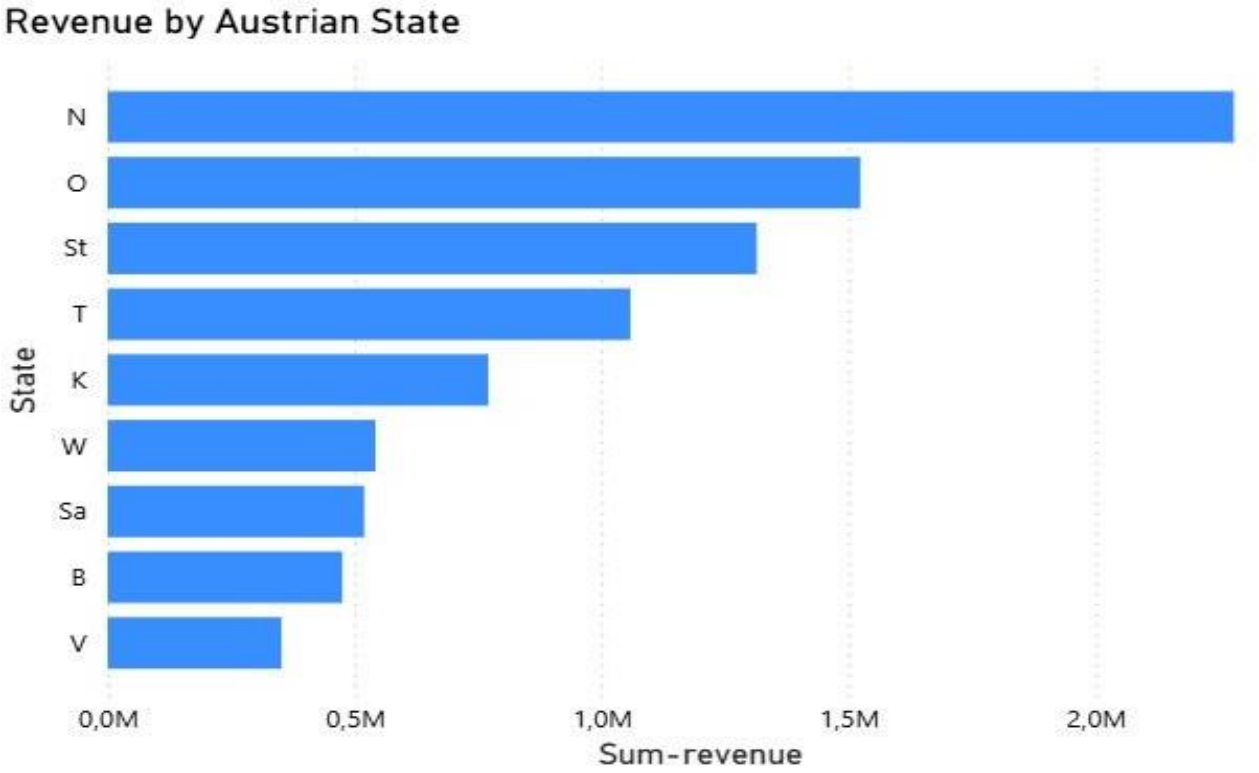

Figure 2: Revenue by Austrian Federal State

Finding

Lower Austria (N) is the strongest region with € 2.28M in revenue, representing 26% of total revenue. Upper Austria (O) and Styria (St) follow with €1.52M and €1.31M respectively. In contrast, Vorarlberg (V) generates only € 352K (4%) and Vienna (W), despite being Austrias largest city, ranks 6th with only €542K. This is a significant and unexpected finding.

Recommendations

1. Investigate why Vienna (W) underperforms relative to its population size. The capital city should represent a major revenue opportunity, and its low ranking suggests either insufficient dealer presence or low marketing activity.

2. Launch targeted marketing campaigns in underperforming states, particularly Vorarlberg (V), Burgenland (B), and Salzburg (Sa), to grow the customer base.

3. Protect and invest in Lower Austria (N) as the top performing region by ensuring adequate dealer coverage and customer retention programs.

3. Revenue by Wine Quality

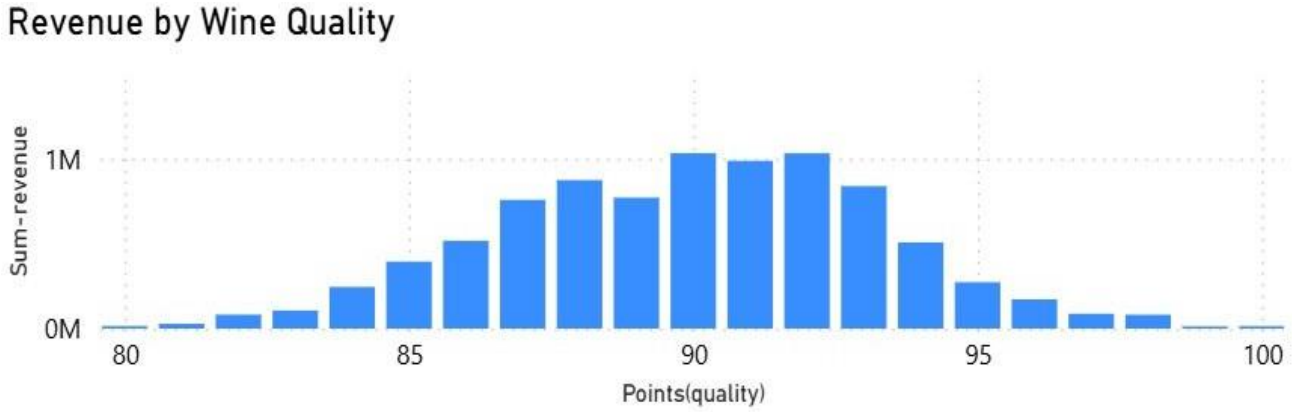

Figure 3: Revenue by Wine Quality Score

Finding

Revenue follows a clear bell-curve distribution peaking at quality scores of 90 - 92 points. Wines rated below 85 generate minimal revenue, while wines above 95 also show declining sales. The sweet spot for revenue is the mid-premium segment (88 – 93 points), which aligns with customer willingness to pay for quality without the extreme premium of top rated wines.

Recommendations

1. Focus on purchasing and marketing efforts on wines scoring 88 – 93 points as this range generates the highest revenue and likely represents the best balance of price and perceived quality for customers.

2. Develop a premium upselling strategy for wines scoring 94+ points. Although volume is lower, premium wines may carry higher margins and enhance brand positioning.

3. Phase out or reduce the assortment of wines scoring below 85 points as they contribute minimally to revenue and may dilute the brand image.

4. Customers by Revenue

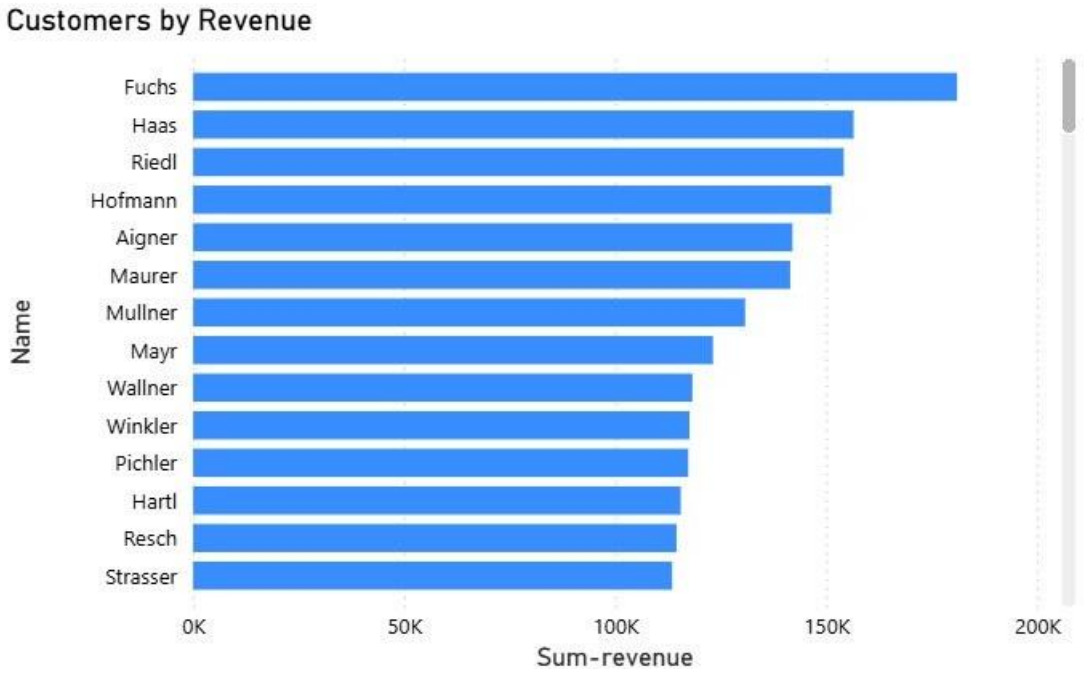

Figure 4: Top Customers by Revenue

Finding

The top customer (Fuchs) generates € 181,007 in revenue, with the top 5 customers (Fuchs, Haas, Riedl, Hofmann, Aigner) collectively contributing over € 784,000. The revenue distribution among top customers is relatively flat. The gap between rank 1 and rank 10 is not extreme, suggesting a reasonably diversified customer base at the top, but also that no single customer is far ahead of others.

Recommendations

1. Introduce a VIP loyalty program for the top 10 customers to strengthen retention. Losing even one top customer represents a significant revenue risk given their individual contribution.
2. Analyze the purchasing behavior of top customers to identify cross selling and upselling opportunities, particularly around premium wine segments.
3. Use the top customer profile (order frequency, preferred wine types, average order value) as a template to identify and acquire similar new customers.

5. Revenue by Winery

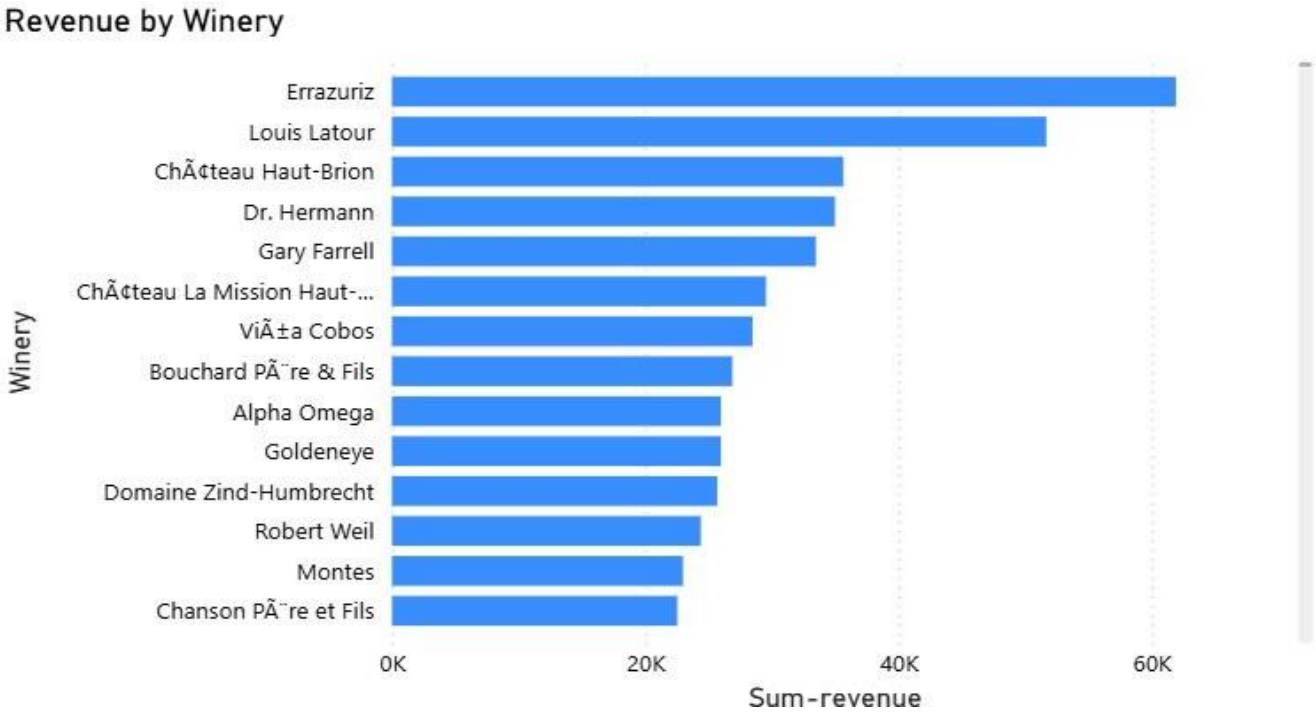

Figure 5: Revenue by Top Wineries

Finding

Errazuriz is the top-performing winery with € 61,920 in revenue, followed by Louis Latour at € 51,679. Château Haut-Brion, Dr. Hermann, and Gary Farrell form a second tier at around €33,000 – €36,000. The steep drop from rank 2 to rank 3 suggests that the top two wineries hold a disproportionate share of winery-level revenue, creating supplier concentration risk.

Recommendations

1. Negotiate preferred supplier agreements with Errazuriz and Louis Latour to secure favorable pricing and supply continuity given their outsized revenue contribution.
2. Actively develop the second tier wineries (Château Haut-Brion, Dr. Hermann, Gary Farrell) through targeted promotions to reduce dependency on the top two suppliers.
3. Explore new winery partnerships, particularly in high-revenue origin countries like Italy and France to diversify the supplier portfolio and reduce concentration risk.

Conclusion & Action Plan

The business intelligence analysis of the wine trade data reveals clear strategic priorities. The business is currently profitable at € 8.83M total revenue but faces concentration risks across multiple dimensions: geographic sourcing (US dependency), customer geography (Lower Austria dominance), and supplier concentration (Errazuriz/Louis Latour). Addressing these risks while capitalizing on the identified growth opportunities, particularly in underperforming Austrian states and the mid premium wine quality segment should be the focus of the next business development cycle.

Priority	Action Item	Timeline
1	Launch VIP loyalty program for top 10 customers	Q1
2	Investigate and address low revenue in Vienna (W)	Q1
3	Negotiate preferred supplier deal with Errazuriz & Louis Latour	Q1
4	Reduce US wine dependency – grow Italian/French sourcing	Q2
5	Target marketing campaign in V, B, Sa states	Q2
6	Focus assortment on 88-93 point quality wines	Q2
7	Phase out low-quality wines (below 85 points)	Q3
8	Develop new winery partnerships in Italy and France	Q3
